

Ceramic, high-quality bearings with, when possible, higher bearing width than OEM's
Increased lifetime

Turbine assemblies (rotors) balanced to 0.2 mgmm
Reduced vibration
Increased bearing lifetime

All aluminum alloy impellers are anodized
Reduced corrosion
Improved hygiene

All components made from high-quality medical-grade stainless steel
Reduced corrosion

Impellers laser-welded to assembly
Increased reliability

Guiding bushing made from a special grade of stainless and is hardened up to 64 HRC
Reduced wear
